Digital Barber Card: Getting Started Guide

Digital Barber Card · https://haircutnow.com/docs/digital-barber-card-getting-started-guide/

Your Digital Barber Card is a shareable business card with one permanent web link. Customers can open it, contact you, and download your contact information.

1. Open your card

Visit Manage your Barber Card or choose **Set up my card** in Biz. Use the Haircut Now account connected to your card or individual listing. For a new email account, verify your email code, create a password, and choose **Save password and continue**. Continue directly from account options to Card setup.

Card setup shows **Free Basic** and **Pro — $4.99/month or $49.90/year** at the top. Choose the path you need from the account you intend to keep.

2. Check your plan

Basic is free with an eligible claimed individual listing. A free listing provides a contact-only card; eligible paid individual listings can also provide their Haircut Now directory booking link.

Pro adds independent editing, custom design, external booking links, analytics, and SVG QR downloads. You can use Pro without a Marketplace listing.

Set up Free Basic

Choose **Create or claim a barber listing** under Free Basic. If you already have an individual listing, claim or connect that listing and complete the ownership checks; do not create a duplicate. If you need a new listing, follow the profile setup steps. In Biz, choose **Set up my barber profile** to open **Set Up Haircut Now Biz**.

Basic becomes available after an eligible individual listing is owned and connected to this account. An unclaimed listing, unfinished profile, or shop-only listing does not by itself activate a Basic Card.

Set up standalone Pro

Choose Pro, select a public username and monthly or annual billing, and complete checkout. You do not need a Marketplace listing. Return to finish your profile and confirm that the Card is active before sharing.

3. Review your information

Check the name, business, photo, and contact details. Basic users can choose **Edit marketplace profile**. Pro users can choose **Edit card**, update **Profile**, **Links**, or **Design**, then select **Save changes**.

4. Check the public card

Once the Card is active, choose **View public card**. Test the contact details and any booking link. Use **Test contact** from the manager to check the downloadable contact.

5. Share your card

Use **Copy** for the permanent link, **Share** for sharing options, or **QR code** to download a printable QR image.

Public sharing and a usable public-card QR code are available only for an active Basic or Pro Card. An unfinished or inactive Card remains in setup. Leaving and returning, including reopening Biz, should keep a valid session signed in; continue setup rather than creating another account.

Routine workflow

Keep your details current, check the public card after edits, and reuse the same permanent link and QR code. You do not need a new QR code for ordinary profile updates.
