Haircut Now Biz App: Barber Getting Started Guide

Haircut Now Biz App · https://haircutnow.com/docs/haircut-now-biz-app-barber-getting-started-guide/

Haircut Now Biz is the barber app for same-day opportunities and connected business tools. Haircut Now's client app is for customers; Haircut Now Shops handles shop operations such as walk-ins and booth rent.

1. Install the barber app

Use Haircut Now Biz for iPhone or Haircut Now Biz for Android.

Screen names and available controls can vary by app version, account connection, and plan. Use the matching option shown in your app; if it is missing, check for an available update or use the linked website workflow.

2. Choose the right account path

- Already registered with Biz: use your existing phone number and password.
- Own a Marketplace listing but have not joined Biz: use **Connect my existing listing** when available and verify ownership.
- New account: follow the verification prompts. For email signup, create a password and choose **Save password and continue**; then choose **Set up my card** or continue the barber setup shown.
- Card-only user: the Digital Barber Card sign-in opens Card access; it does not register you as a Biz barber.

Do not create a second account just because an existing listing or Card is not visible.

A valid saved session should remain signed in when you leave and return or reopen the app. Unfinished setup is not a sign-out. See the sign-in and password guide if you cannot continue.

3. Complete My Business

Save your workplace address and experience, add a profile photo, and add haircut gallery photos or choose to add them later. Preview your saved profile and finish setup.

Profile setup and verified Marketplace ownership are separate steps.

4. Learn the four main areas

- **Today:** same-day requests, same-day appointments, and notifications.
- **Schedule:** your connected appointment calendar, with a separate Same-Day route.
- **My Business:** profile, photos, Marketplace listing, and available Card/product tools.
- **Account:** account settings, help, and sign-out options.

5. Prepare to receive requests

Allow notifications, verify your workplace information, and review request details before responding. Same-day opportunities depend on nearby demand and account eligibility; they are not guaranteed.

6. Set up scheduled booking

For eligible connected appointment access, configure services, prices, working hours, breaks, and time off. Check your public listing’s booking experience.

Keep each workflow distinct

Marketplace bookings, same-day requests, and Walk-In Manager check-ins use different workflows. Follow the controls for the appointment type you are handling.
