How Clients Can Save Your Digital Barber Card to Contacts

Digital Barber Card · https://haircutnow.com/docs/how-clients-can-save-your-digital-barber-card-to-contacts/

Customers can download your contact information from the public card.

Save a contact

1. Open the public card link or scan its QR code.
2. Choose **Add to Contacts**.
3. Open the downloaded contact file if prompted.
4. Review the details and complete the phone's save or import step.

The final prompts depend on the device and browser. Downloading the file alone may not save it to the address book.

Test your own contact information

In your card manager, choose **Test contact**. Check the name, business, phone, and other available details before sharing the card.

If the details are wrong, update your Marketplace profile for Basic or use **Edit card** for Pro, then download the contact again.

After your details change

Your public card shows current information, but previously saved phone contacts do not automatically update. Customers can reopen your permanent card link and save the revised details.
