How to Check In for a Walk-In

Walk-In Manager makes it easy to join a business's walk-in waiting list without creating an account or downloading an app.

Check in at the kiosk

1. Go to the business's Walk-In Manager kiosk.
2. If service choices appear, select the service you need. Then enter your first name and last initial as requested.
3. Select **Join the walk-in list**.
4. Wait for confirmation that your entry was accepted.

Your check-in places you in the business's current walk-in queue. The screen may also show how many clients are ahead of you.

Check in with the shop’s QR sign

Scan the sign displayed inside the shop with your phone’s camera. Open the check-in page, choose a service if offered, enter your name, and submit once. Wait for confirmation; ask staff before submitting again if you are unsure.

You do not need an account, app download, GPS permission, or device pairing. The phone page shows confirmation and your own check-in status. It does not show the full public waiting list.

While you wait

Stay close enough to hear or see when staff are ready for you. You can check the public queue for your current position when it is available.

Scheduled appointments and changes in staff availability can affect the actual wait time, so the number ahead of you is a better guide than an exact time estimate.

If no team members are available

Follow the kiosk’s availability message. It may say nobody is checked in, sign-in is paused, or sign-in is closed. If the kiosk is open but your selected service has no eligible Ready team member, it may still let you join and wait. Ask staff if you are unsure. A booking alternative may appear when configured.

Do I need the Haircut Now app?

No. Use the shop’s kiosk or QR sign. Neither requires a customer account or app; QR check-in also does not require GPS permission or device pairing.

Service selection and privacy

Service selection appears only at businesses that enable it. The kiosk does not let you choose a specific team member. Your first name and last initial appear on the public queue.
