How to Edit Your Digital Barber Card Profile and Design

Digital Barber Card · https://haircutnow.com/docs/how-to-edit-your-digital-barber-card-profile-and-design/

Open your card manager and confirm that the correct card is displayed.

Update a Basic card

Choose **Edit marketplace profile** when available. Update the connected individual listing, save it there, and reopen your public card after the listing changes have synced.

Edit a Pro card

1. Select **Edit card**.
2. In **Profile**, update **Display name**, **Business or shop**, **Professional title**, **Short biography**, and **Services or specialties**.
3. Separate services with commas.
4. In **Links**, update your phone, public email, address, website, and social URLs.
5. In **Design**, choose your images, layout, and accent color.
6. Review **Live preview** and choose **Save changes**.
7. Wait for **Card saved**, then choose **View public card**.

Upload images

Profile photos, business logos, and cover images accept JPEG, PNG, or WebP files up to 8 MB each. Wait for an upload to finish before saving other changes.

Uploads are attached to your card when uploaded; do not treat closing the editor as undoing an image upload.

Optional links

Leave optional social or website fields blank when you do not use them. Enter a full destination URL for links you do include, then test them from the public card.
