How to Manage Your Marketplace Listing from Haircut Now Biz

Haircut Now Biz App · https://haircutnow.com/docs/how-to-manage-your-marketplace-listing-from-haircut-now-biz/

Marketplace tools open the listing verified for your account. The available fields depend on your plan, connection, and app version.

Open your listing

Create or claim your listing on the website first, then sign in to Biz with that same account. Go to **My Business → Marketplace listing** to open the connected listing. If an ownership prompt appears, complete it for your original listing. See the existing-listing guide if it is missing.

Confirm the listing and address before editing.

Edit the available information

Update the business details shown in the editor. Use **Update service address** where available to change the service location.

For photos, choose **Add photo**, **Replace photo**, or **Remove** as appropriate. Review the image preview, then choose **Save listing**.

A message such as **Ready to save** or **Removed · Save to confirm** means the change still needs saving.

More listing settings

The app may provide **Manage Listing**, **View Clients**, **Edit Services**, or **View Reviews** website actions. These open the connected website tools rather than a second listing.

An existing valid session and verified connection should open the website tools without repeated sign-in. Complete a first-time ownership check when requested. Return to the app and retry the original action if necessary.

Preview what clients see

Use **Preview Marketplace Listing** in My Business when available. Check the public name, location, photos, and available booking options.

On the website, the listing editor's **Preview Listing** action shows the customer view while you remain signed in. Owner-only controls are hidden in that preview; use **Exit Preview / Back to Listing Management** to return to editing. Review the name, location, photos, and customer booking options for your plan.

If editing fails

Read the message before retrying. A Premium-required message concerns plan access; a connection or temporary-service error does not necessarily mean you need to purchase a plan.

Do not create another listing to solve an editing or account-connection error.
