How to Share Your Digital Barber Card and Download Its QR Code

Digital Barber Card · https://haircutnow.com/docs/how-to-share-your-digital-barber-card-and-download-its-qr-code/

Share your permanent public card link so customers can return to your latest details.

Finish setup first. Public sharing and a usable public-card QR code appear only when your Basic or Pro Card is active. If it says “not ready yet,” return to Card setup; being signed in alone does not activate a Card.

Copy or share the link

1. Open your card manager.
2. Find **Permanent card link**.
3. Choose **Copy** and paste it into a message, email signature, or social profile.

Use the public card URL rather than the management address.

Share a card image

Choose **Share** to open the public card’s sharing options. Use **Share image** when your device supports it, or **Download PNG** to attach the complete card image to a post. **Share link** shares the card’s web address.

A downloaded image is a snapshot. Download it again after changing details you want shown in the image.

Download your QR code

1. Choose **QR code** in the manager.
2. Download **PNG**, or **SVG** with Pro.
3. Add it to printed materials or display it for clients.

4. Scan a test copy before printing a large batch.

The QR destination stays the same when you update the card.

Use an NFC card

Program your permanent public URL into your NFC tag using the tag provider’s instructions. The QR image itself is not the URL you enter into the NFC writer.
